Allowable Subject Matter

1. Claims 1, 3-9, 11-14, 16-22, 24, 25 and 27-32 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. As to claims 1, 27 and 30, the prior arts of record do not anticipate or render obvious to one skilled in the art an active matrix liquid crystal display comprising various elements as claimed, more specifically wherein within the liquid crystal layer, liquid crystal molecules lying in proximity to the active matrix substrate are initially subjected to a prescribed orientation in a non-power mode so that long-axis directions thereof substantially match alignment directions of the first and second group of pixel electrodes respectively.
4. As to claims 3, 25, 28 and 29, the prior arts of record do not anticipate or render obvious to one skilled in the art an active matrix liquid crystal display comprising various elements as claimed, more specifically wherein liquid crystal molecules lying in proximity to the active matrix substrate are initially subjected to an orientation providing a prescribed orientation direction in a non-power mode so that long-axis direction thereof are slanted with respect to or against to (claim 25) alignment directions of the first and second group of pixel electrodes respectively, and they are also twisted to lie across the first and second group of pixel electrodes respectively in plan view when being extended from the active matrix substrate to the opposite substrate.
5. As to claims 4, 11 and 31, the prior arts of record do not anticipate or render obvious to one skilled in the art an active matrix liquid crystal display comprising various elements as claimed, more specifically a first orientation direction is slanted with respect

to alignment directions of the first and second groups of pixel electrodes, a second orientation direction is slanted with respect to the alignment directions of the first and second groups of pixel electrodes wherein one of the first and second orientation directions is directed towards the first group of pixel electrodes in plan view, while the other is directed towards the second group of pixel electrodes in plan view.

6. As to claims 12-14, the prior arts of record do not anticipate or render obvious to one skilled in the art an active matrix liquid crystal display comprising various elements as claimed, more specifically a first orientation direction in relation to alignment directions of the first and second group of pixel electrodes so that a pre-tilt angle ranging from 3° to 30° is imparted to liquid crystal molecules lying in proximity to the active matrix substrate wherein the pre-tilt angle ranging from 3° to 30° is imparted to liquid crystal molecules lying in proximity to the active matrix substrate by forming pillar structures that are made of an inorganic material and are slanted in a specific direction on the substrate.

7. As to claim 16, the prior arts of record do not anticipate or render obvious to one skilled in the art an active matrix liquid crystal display comprising various elements as claimed, more specifically an inorganic orientation film that is formed on a surface of the substrate and is composed of at least one type of pillar structure having pillars which are slanted in a specific direction and an organic orientation film that is formed on a surface of the opposite substrate and that is composed of orientational high molecules.

8. As to claims 19 and 32, the prior arts of record do not anticipate or render obvious to one skilled in the art an active matrix liquid crystal display comprising various

Art Unit: 2871

elements as claimed, more specifically wherein liquid crystal molecules oriented in the liquid crystal layer are subjected to prescribed orientations in a non-power mode in such a way that a first pre-tilt angle imparted to liquid crystal molecules lying in proximity to the active matrix substrate becomes larger than a second pre-tilt angle imparted to liquid crystal molecules lying in proximity to the opposite substrate.

9. As to claim 24, the prior arts of record do not anticipate or render obvious to one skilled in the art an active matrix liquid crystal display comprising various elements as claimed, more specifically wherein the liquid crystal molecules lying in proximity to the substrate are initially oriented in a specific direction in the non-power mode in such a way that the long-axis directions thereof are made substantially parallel with alignment directions of the first and second group of pixel electrodes on the active matrix substrate.

10. The closest reference USPAT 6,507,381 discloses an active matrix liquid crystal display wherein liquid crystal molecules are kept in oriented state in which they incline by an angle in the range of 3° to 10° with respect to the direction that is normal to the opposing substrate and the pixel substrate. However, the above reference alone or in combination with any other prior arts references fail to teach or suggest the claimed inventions.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
